

CLAIMS

1. An adaptor for a braking deceleration device for doors or movable furniture parts, which essentially comprises a plunger which can be pushed into a housing against a braking force, with an adaptor body,  
  
characterised in that  
  
in the adaptor body at least one accommodation recess for accommodating the housing of the braking deceleration device is made, and in that the adaptor body comprises at least one smooth external surface by way of which it can be fixed to the frame or furniture carcass by means of a suitable adhesive.
2. The adaptor according to claim 1, characterised in that the adaptor body comprises two smooth external surfaces which are essentially aligned at right angles in relation to each other.
3. The adaptor according to claim 1 or 2, characterised in that the adaptor body comprises an essentially triangular cross section.
4. The adaptor according to any one of claims 1 to 3, characterised in that two accommodation recesses are made in the adaptor body.
5. The adaptor according to any one of claims 1 to 4, characterised in that an adhesive tape with double-sided adhesive action is used as an adhesive.
6. The adaptor according to any one of claims 1 to 5, characterised in that the front end of the accommodation recess provided in the adaptor is of pedestal-like design, and in that the braking deceleration device comprises a rim tightly fitted in the pedestal-like recess.
7. The adaptor according to any one of claims 1 to 6, characterised in that on the side on which the accommodation recess is provided, the adaptor body comprises a circumferential rim.
